

CLAIMS

1

2 45. (new) A wave and tide actuated submersible pump for use in an open body
3 of water, said wave and tide actuated submersible pump comprising a pump
4 cylinder (7) having an open top end and a closed bottom end (13), said cylinder
5 (7) is affixed to a structure located in an open body of water,

6 an inlet check valve (11) and an outlet check valve (12) connected to
7 openings in the pump cylinder (7) near the lower end of said cylinder (7), said
8 inlet check valve (11) allowing for the intake of water from the body of water and
9 said outlet check valve (12) controlling the flow of water from the pump to a
10 remote location,

11 a weighted piston (8) vertically reciprocally movable within the pump
12 cylinder (7) and forming a pump chamber defined by said cylinder walls, said
13 weighted piston and bottom end of said cylinder, said piston weight is sufficient
14 to pump the fluid in which it is contained while returning said piston to its' lowest
15 point of travel,

16 a buoy (1) connected to the weighted piston (8) by a flexible connector (4)
17 for driving the weighted piston (8) on an upward stroke in response to wave
18 action, said weighted piston (8) being driven in a downward stroke under force of
19 gravity,

20 a means for restricting the upward stroke of the weighted piston (8) within
21 the pump cylinder (7),

1 said flexible connector (4) passing through the top of said cylinder (7) and being
2 attached to the top of the weighted piston (8) at a first end and to a lifting eye of
3 the buoy (1) at a second end.

4 46. (new) The wave actuated submersible pump of claim 45 wherein said means
5 for restricting the upward stroke of the weighted piston is a plurality of stop pins
6 (6) which are securely attached and pass through openings adjacent said open
7 top end of the pump cylinder (7).

8 47. (new) The wave actuated submersible pump of claim 45 wherein said lower
9 plate (15) is a bottom plate end is suitable for imbedding the pump cylinder in
10 the floor of the open body of water.

11 48. (new) The wave actuated submersible pump of claim 45 wherein said bottom
12 enclosed end is a bottom flange plate (13) for securing the pump cylinder to
13 submerged foundations at the floor of the open body of water.

14 49. (new) The wave actuated submersible pump of claim 45 wherein said
15 weighted piston (8) includes sealing rings to provide a seal against the pump
16 cylinder (7) .

17 50. (new) The wave actuated submersible pump of claim 45 wherein said buoy
18 (1) includes a mooring eye (3) used to stabilize the direction of travel of the buoy
19 (1).

20 51. (new) The wave actuated submersible pump of claim 45 wherein a mooring
21 guide and wear ring (5) mounted to the top open end of the pump cylinder (7),
22 said connector (4) passing through the top of said cylinder said mooring guide

1 and wear ring (5) and being attached to the top of the weighted piston (8) at a
2 first end and to a lifting eye (2) of the buoy (1) at a second end.

3 52. (new) The wave actuated submersible pump of claim 45 wherein said
4 weighted piston (8) includes an air vent passageway (18), a check valve ball (19)
5 and an air vent chamber (34) for allowing air entrapped within the pump chamber
6 to vent through the air vent passageway and out the open top of the pump
7 cylinder (7).

8 53. (new) The wave actuated submersible pump of claim 45 wherein the water
9 pumped by the submersible pump is delivered by outlet check valve means (12)
10 to a hydro-electric power plant (45).

11 54. (new) The wave actuated submersible pump of claim 45 wherein the water
12 pumped by the submersible pump is delivered by outlet check valve means (12)
13 to pump contaminated fluid into evaporation ponds or large bodies of water for
14 mineral and chemical extraction, refinement (41) and toxic waste removal from
15 contaminated fluids (39).

16 55. ((new) The wave actuated submersible pump of claim 45 wherein the water
17 pumped by the submersible pump is delivered by outlet check valve means (12)
18 to pump salt water, creating large bodies of water and seas for the evaporation of
19 said water thus forming moisture laden clouds where prevailing winds will blow
20 these clouds to natural and man made barriers (50) causing rain to fall, creating
21 new pasture and farmland (49) whilst moderating the earth's climate (51); said

1 additional moisture will cleanse the atmosphere and the whole cycle shall act as
2 a radiator cooling the earth.

3 56. (new) The wave actuated submersible pump of claim 45 wherein the water
4 pumped by the submersible pump is delivered by outlet check valve means (12)
5 to desalinate water (47) using pumps as a source of energy to extract fresh water
6 from the saltwater.

7 57. (new) The wave actuated submersible pump of claim 45 wherein the water
8 pumped by the submersible pump is delivered by outlet check valve means (12)
9 to a levied reservoir to raise sea animals and organisms for the harvesting of said
10 sea animals and organisms (43).

11 58. (new) The wave actuated submersible pump of claim 45 wherein the water
12 pumped by the submersible pump is delivered outside a levied area by outlet
13 check valve means (12) to claim land from the sea by using these pumps with
14 their suctions within the levied areas, to pump water out of said levied area (42).
